MOHAMMED NABIL

Mid-Level Backend Developer | Python / Django | ERP, HR & E-Commerce Systems

Location: Egypt (open to relocation) | Phone: +20 106 027 3497 | Email: MohaMedNabiLpro2024@gmail.com
LinkedIn: https://www.linkedin.com/in/mohamed-nabil-1458872b2 | GitHub: https://github.com/mohamedN2018 | Portfolio: https://mohamednabilpro.deplois.net

SUMMARY

Mid-level Backend Developer (Python / Django / DRF) with 3+ years of experience, currently a Software Engineer at Q-Tech Solutions (promoted within the first months), building business systems end-to-end, from requirements and feasibility study to architecture, APIs and production deployment on Hostinger VPS with Dokploy and Docker. Delivered 13+ production platforms for companies and merchants, including enterprise HR & payroll with biometric attendance, a multi-vendor marketplace with multi-currency, tax zones and seller payouts, an offline-first POS & inventory system, a multi-store loyalty network and a company operations platform serving every department. Builds bilingual Arabic/English (RTL) products, works spec-first with AI coding agents for fast delivery, and is open to relocation.

KEY ACHIEVEMENTS

- **Zero to Launch:** plan, build and deploy complete systems alone, from the first idea to a live production server (Hostinger VPS + Dokploy).
- **Enterprise HR & Payroll:** attendance with biometric devices, leaves, overtime, salary structures and automated payroll, with employee self-service.
- **Multi-Vendor E-Commerce:** multi-currency, tax zones (VAT-ready), payment gateways, seller commission ledger and payouts, procurement and multi-warehouse inventory.
- **Retail POS:** offline-first cashier and inventory with encrypted local data, cloud backups and per-device licensing.
- **Product Ownership:** led discovery, market research and feasibility study for a client loyalty platform before building it.

SKILLS

Core Technical Skills (hands-on)

- **Backend:** Python, Django, Django REST Framework (DRF), RESTful API design, JWT authentication, Django Channels (WebSockets), Django ORM, query optimization
- **Databases:** PostgreSQL, MySQL, Redis, SQLite, database design and normalization
- **Deployment & DevOps:** Docker, Docker Compose, Linux VPS, Hostinger, Dokploy, domains/DNS, SSL, Git, GitHub
- **Frontend:** HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS
- **Integrations:** Payment gateways, WhatsApp, third-party REST APIs
- **Product & Analysis:** Requirements gathering, feasibility studies, system architecture, technical documentation, UI/UX sense from a design background

AI-Assisted Skills (delivered with AI coding agents under my planning and review)

- **Frontend apps:** Vue.js single-page applications, PWA, Arabic RTL dashboards
- **Complex business modules:** Payroll engines, procurement and BOMs, multi-currency and tax zones, seller payouts and commissions
- **Other:** Offline-first desktop app (local encrypted database + cloud sync), biometric attendance device integration
- **Workflow:** Claude Code and similar AI coding agents, spec-driven development, reviewing and testing generated code

WORK EXPERIENCE

Software Engineer (Backend – Python / Django) | 05/2026 – Present
Q-Tech Solutions | Full-time

- Promoted within the first months of joining.
- Built the company operations platform used by management and all departments: employee hub with payslips, modular department dashboards, client portal (projects, invoices, support tickets) and corporate website (q-tech-solutions.com).

- Built the enterprise HR & payroll system with 15+ modules: attendance with biometric devices, leaves, overtime, bonuses, deductions, salary structures and automated monthly payroll (hrs.deplois.net).
- Built Q-Tech PharmaSyst, a pharmacy management system with medicine inventory, batch and expiry tracking, sales, purchasing and reporting (qtechpharmasyst.deplois.net).
- Deploy and maintain company systems in production on Hostinger VPS with Dokploy and Docker.

Backend Developer (Python / Django) | 01/2022 – Present
Freelance (Self-Employed) | Remote

- Build complete systems from zero to launch: idea, planning, requirements, database design, backend, frontend, testing, deployment and post-launch support.
- Deploy projects to production on Hostinger VPS using Dokploy (Docker-based deployment platform): domains and DNS, SSL certificates, environment variables, databases and scheduled backups.
- Delivered 10+ client platforms including a multi-vendor marketplace, an offline-first POS & inventory system, a multi-store loyalty network and content platforms.
- Design REST APIs with Django REST Framework: JWT authentication, role-based permissions, versioning, filtering, pagination and audit logging.
- Model relational schemas in PostgreSQL and MySQL (payroll, inventory, orders, commissions, loyalty points) and optimize queries with indexing, select_related/prefetch_related and Redis caching.
- Work spec-first with AI coding agents: write the plan, architecture and data model, then review, test and refine the generated code, cutting delivery time from months to weeks.
- Integrate payment gateways, WhatsApp and third-party APIs; containerize every project with Docker and Docker Compose.

PROJECTS

Enterprise HR & Payroll Management System (Q-Tech) | hrs.deplois.net
Tech: Django, Django REST Framework, PostgreSQL, JWT, Vue.js, Docker

- Built a complete HR platform with 15+ modules: employee records, departments, positions, work schedules, attendance, leave types and leave requests, overtime, bonuses and deductions.
- Implemented configurable salary structures feeding an automated monthly payroll run, plus an employee self-service portal (attendance, leaves, overtime, salary slips).
- Integrated biometric attendance devices; secured the API with JWT (access/refresh tokens), role-based permissions and full activity logs.
- Added a CMS-managed public website (features, pricing, FAQs, testimonials, theme settings) and API reference documentation.

Q-Tech Solutions – Company Operations Platform | q-tech-solutions.com
Tech: Django, Django REST Framework, PostgreSQL, Vue.js, Docker

- Built the corporate website and an internal platform with 30+ screens across 3 portals (public site, employee hub, client portal), used by management and all departments.
- Employee hub: profiles, payslips and a modular dashboard where each department's tools load as separate modules.
- Client portal: projects tracking, invoices and support tickets; public site with team, careers, blog, products store and project portfolio.
- Added live chat, email verification and password recovery flows, and a visitor analytics tracking API.

q-shop – Multi-Vendor Marketplace | qshop.deplois.net
Tech: Django, Django REST Framework, PostgreSQL, Redis, Vue.js, Docker

- Designed the product concept and full scope; delivered with an AI-assisted workflow. 80+ REST endpoints across 20+ domain modules serving 3 apps: customer storefront, seller console and platform admin.
- Catalog with variants, attributes, brands, bundles and digital products (license keys); cart, coupons and checkout; order confirm/cancel and push-to-cashier flow.
- Multi-warehouse inventory (receive, transfer, adjust, low-stock alerts) and procurement: suppliers, purchase orders, BOMs, work orders, batches and serial numbers.
- Finance layer: multi-currency with exchange rates, tax zones, multiple payment gateways, seller payouts with commission ledger, fraud checks, returns, reviews moderation, promotions, gift cards and analytics.

Seshat – Offline-First POS & Inventory System | seshat.deplois.net
Tech: Windows desktop app, local encrypted database, cloud licensing & backup API

- Planned the full product and technical design; built for retail stores (supermarkets, pharmacies, clothing and spare-parts shops) with an Arabic-native RTL interface.
- Offline-first architecture: sales, inventory and reports run on a local encrypted database; the cloud handles licensing and encrypted backups with automatic sync on reconnect.
- Cashier (barcode, split payments, suspended invoices, returns, thermal receipts), inventory (variants, unit conversion, POs, warehouse transfers, stock counts, FEFO expiry tracking).
- Shift management with cash-drawer reconciliation, employee permissions, audit logs and 12 report types exported to CSV, Excel and PDF; per-device trial, annual and lifetime licensing.

Walaee – Multi-Store Loyalty Network | walaee.deplois.net
Tech: Django REST Framework, PostgreSQL, JWT, Vue.js

- Turned a client idea into a product: led planning, market research and the feasibility study, defined the business model and technical architecture, then delivered the product.
- One shared loyalty program across a network of partner stores, with merchant dashboards, customer accounts and a versioned REST API (v1) secured with JWT.

Q-Tech PharmaSyst – Pharmacy Management System (Q-Tech) | qtechpharmasyst.deplois.net
Tech: Django, Django REST Framework, PostgreSQL

- Planned and delivered a pharmacy management system covering medicine inventory with batch and expiry tracking, sales, purchasing and suppliers, and reporting.

Nesma Cakes – Bakery Ordering Web App (PWA) | nesmacakes.deplois.net
Tech: Django, PWA, WhatsApp integration

- Designed and built a focused ordering site for a local bakery: categorized catalog, custom cake requests, gallery and reviews, WhatsApp ordering, bilingual Arabic/English, installable as a mobile app.

EARLIER PROJECTS

- Kunooz – Learning platform aggregating courses, books and resources; content categorization, search and database performance tuning.
- NextJobs – Job portal with advanced search and filters, user authentication and job management.
- CodeAnyway – Backend infrastructure and APIs for an IT services company platform.
- Outared – Core backend components and secured user functionality for a web services platform.
- WordPulseNews – News platform with categorized content delivery and article management.
- BackupManager – Automated backup and restore with scheduled jobs and REST integrations.

EDUCATION

Diploma of Industrial Secondary Education – Decoration & Design | 2019 – 2022
Specialization: Fine Arts & Graphic Design | Egypt

CERTIFICATIONS & TRAINING

Full-Stack Web Development Diploma (100 hours)

- Covered HTML, CSS, JavaScript and Vue.js (frontend) and PHP, MySQL and Laravel (backend); built dynamic web applications as practical projects.

LANGUAGES

- **Arabic:** Native
- **English:** Intermediate (technical reading and documentation)

ADDITIONAL INFORMATION

- **Nationality:** Egyptian
- **Relocation:** Open to relocation; available to join on short notice
